	Mail Completed Form to: Bureau of Public Water Supply/P.O. Box 1700/Jackson, MS 39215 Phone: 601-576-7518

PROOF OF PUBLICATION

2012 AUG 17 AM 8: 45

STATE OF MISSISSIPPI PONTOTOC COUNTY

Personally appeared before me, the undersigned Notary Public In and for the State and County aforesaid, Thicke State and Williams who being duly sworn,
states on oath that he was publisher of THE PONTOTOC PROGRESS, published at
Pontotoc, Pontotoc County, Mississippi, at the time the attached:
2011 Annual Drioking Water Greating
Report
Doins of Ecru Water & Source Dopt.
· .
was published and that said notice was published in said paper
consecutive times, as follows:
Volume 84 Number 31 on the
Volume, Number, on the
day of, 2012
VolumeNumber, on the
day of, 2012
Volume, Number, on the
day of, 2012
Volume, Number, on the
day of, 2012
Volume, Number, on the
day of, 2012
Affiant further deposed and said that said newspaper, THE PONTOTOC PROGRESS, has been estab-
lished for at least twelve months in Pontotoc County, State of Mississippi, next prior to the date of the first publication on the foregoing notice hereto attached, as required of newspapers publishing legal
notices by Chapter 313 of the Acts of the Legislature at the State of Mississippi, enacted in regular ses-
sion in the year 1935.

2011 Annual Drinking Water Quality Report Town of Ecru Water & Sewer Department PWS# 0580003 May 2012 SECEIVED - WATER SUPPLY iga sang impangga kerandinan ga

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to interm the fact the quality water and services we deliver to you every day. Our constant goal is to provide you and a service and been dable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Eutaw Formation Aquifer,

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Town of Ecru have received a moderate susceptibility ranking to contamination.

If you have any questions about this report or concerning your water utility, please contact Tom Todd at 682-489-3881. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly echeduled meetings. They are held on the first Tuesday of each mornth at 6:00 PM at the Town Hall Board Room.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during for the period of January 1th to December 31th, 2011. In cases where monitoring drinking water contaminants that we detected during for the period of January 1th to December 31th, 2011. In cases where monitoring wasn't required in 2011; the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or conteminants from the presence naturally occurring minerals and, in some cases, radioactive materials and pacteria, that may come from sewage treatment plants, of enimals or from furmer sacrific minerals contaminants, such as salts and metals, which are necessary occurring or result from urban storm-water runoff, industrial, or domestic wastevaler discharges, oil and gas production, mining, or farming, pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses: organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems, radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is agree to drink processes and petroleum productions that limit the amount of certain contaminants in water provided by public water systems. All drinking water including bottled drinking water, may be reasonably expected to contaminants in water provided by public water systems. All drinking water including bottled drinking water, may be reasonably expected to contaminants in distance that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level .- the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which is water system.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as fessible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health, MCLGs allow for a margin of safety.

Maximum: Residual Dismlectant Level (MRDL) — The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) — The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (opm) or Milligrams per liter (mg/l); one part per million corresponds to one minute in two years or a single penny in

Parts per billion (ppb) or Micrograms per liter, one bart per billion corresponds to one minute in 2,000 years, or a single penny in Copyrights and the company of the confidence of

76. Xylenes	N	2011	.0007	No Range	ррт	10	10	Discharge from petroleum factories; discharge from chemical factories
Disinfecti	on By-	Product	s				Ar Air	
82 TTHM [Total trihalomethenes]	N.	2010	2.26	No Range	ppb	0		By-product of drinking water chlorination.
Chlorine	N	2011	.90	31 - 1.19	ppm	0	MDRL =	Water additive used to control microbes

Most recent sample. No sample required for 2011.

As you can see by the table, our system had no contaminant violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no colliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in it present, elevated levels or lead can cause serious riestin problems, especially for pregnant worten and young shidrent. Dead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality thinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water. tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hottine or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

*****A MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING*****

In accordance with the Radionuclides Rule, all community public water supplies were requires to sample quarterly for radionuclides beginning January 2007 – December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological health taboratory; the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result or penulsu analyses and repoining or repoining or repoining or resource samples and results until runner notice. Annough this was not are result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, your water system has not completed the monitoring requirements. The Bureau of Public Water Supply has taken action to ensure that your water system be returned to compliance by March 31, 2013. If you have any questions, please contact Melissa Parker, Deputy Director, Bureau of Public Water Supply, at 601.576.7518.

The Town of Ecru Water & Sewer Department works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
